Objectives	Measures	Status	Target year	Comments on target achievement
<b>Ensuring/improving the proper handling of waste</b>	Implementation of targeted awareness-raising measures and introduction/provision of tools to improve documentation		2023 f.	Regular inspections and instructions on correct waste treatment by the environmental specialist and the waste management officer have raised awareness among employees. A waste page with all the necessary documents and information has been created in Sharepoint.
<b>Ongoing reduction of waste</b>	Optimisation of project and work processes to reduce waste volumes and material usage		2023 f.	In many projects, waste issues are already coordinated in advance. As a matter of principle, the aim is to reuse materials and raw materials. If this is not possible, waste is handed over to authorised, mostly regional waste disposal companies in order to avoid long and costly transport.
<b>Process optimisation for processing waste-related data</b>	Adjustment of billing modalities for construction projects through separate accounting		2023 f.	Separate accounting has been implemented by the construction companies concerned. The separate reporting of waste quantities and construction activities makes it easier to record the required data.
<b>More efficient water use</b>	Improvement of data collection in order to define measures after more detailed evaluation		2023f.	For external water deliveries, a monthly record is now kept centrally recording of the quantities of water used is now carried out centrally as part of the invoicing process of the executing companies. No further optimisation measures have been derived from this for the time being.
